

# The Syteca Platform Securing Your Inside Perimeter

Powerful access controls ■ Advanced monitoring capabilities ■ One single platform

## Employee errors and malicious activities account for 80% of insider incidents\*

Limited visibility into user activity poses significant security risks:

- Credential theft causes **20%** of security breaches\*
- The vast majority of threats — **87%\*** — go undetected for longer than a month
- Each data breach costs an average of **\$4.88 million\*\***

\*2023 Cost of Insider Risks Global Report by Ponemon Institute

\*\*2024 Cost of a Data Breach Report by IBM Security

## Transforming human risks into human assets

Syteca's advanced **user activity monitoring** and **privileged access management** solutions turn weaknesses into strengths.

The Syteca platform empowers you to effortlessly manage access, gain real-time insights into user actions, and respond swiftly to potential threats.

*Boost your CISO's efficiency, elevate your organization's security posture, and simplify compliance — all with a single platform.*

## Comprehensive cybersecurity for your inside perimeter

### Privileged access management

#### Precise access control

Get granular control over high-risk user interactions and prevent unauthorized access with MFA and optimized password management.

#### Robust credential management

Secure passwords in a vault, enable controlled sharing, and automate rotation. Leverage check-in/check-out for temporary access.

#### Privileged session monitoring

Track privileged user actions with real-time playback and multi-monitor recording. Employ index-based search for swift audits.

#### Automated account discovery

Identify and secure user accounts seamlessly, ensuring no access points are overlooked.

### User activity monitoring

#### Advanced user monitoring

Enhance accountability by overseeing how regular, privileged, and third-party users interact with your sensitive data.

#### Real-time alerts

Receive prompt notifications about suspicious user actions and automate incident response.

#### Visually structured analytics

Make informed security decisions with comprehensive reports, productivity dashboards, and detailed user activity logs.

#### Detailed forensic evidence

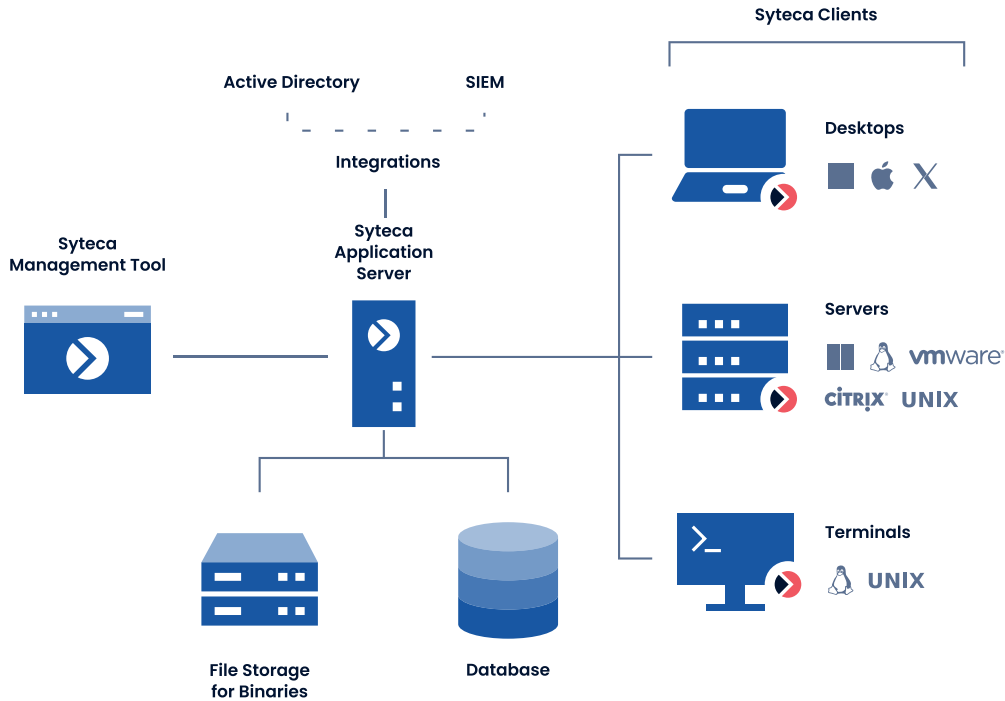

Take advantage of session recordings and detailed search parameters to streamline incident investigations and reconstruct the chain of events.

Meet cybersecurity standards: HIPAA, PCI DSS, NIS2, DORA, NIST, GDPR, SWIFT, ISO

## Syteca supports more platforms than other competitors

## How does it work?

### Platform benefits

- Prompt incident response with a visually structured evidence trail
- Uninterrupted monitoring with continuous oversight, even during network loss
- Fast and painless deployment
- Seamless integration with SIEM tools, ticketing systems, and SSO solutions
- Lightweight agent and optimized data storage
- Military-grade data encryption of passwords, audit logs, and connections

## Why Syteca?

### Save time

- Deploy Syteca quickly and painlessly with our professional tech support
- Minimize downtime with automated processes, incident alerts, and real-time threat response

### Save money

- Only pay for the security features your organization needs
- Reduce your incident-handling costs by up to 50%

### Guard your reputation

- Protect data and comply with IT requirements to boost your brand's image
- Prevent reputational damage with a proactive insider risk management approach

### Empower your team

- Convenient dashboards enable your security team to make data-driven decisions
- Retain employee confidence with powerful anonymization of personal data
